- 99.9% uptime guarantee
- Fully managed service
- CentOS operating system

Security

- Initial setup and fine tuning
- Initial security hardening
- Firewall & Mod_security installation

Servers

- RAID-10 Disk Space
- MultiCore CPU
- 100 Mbit/s connectivity

Private Email & Hosting Features

Unlimited Domains on VPS	CentOS 7.x operating system	Full root access
Apache, PHP, MySQL pre-installed	MTA - Exim (cPanel)	2 Dedicated IP Addresses
Virtuozzo VPS technology	cPanel eatures	Free Backups
Private nameservers	99.9% uptime	WorldClass VPS Network

Benefits of Private Email & Hosting:

Scalable on demand, with no downtime

Need more resources for your Managed VPS on the fly? With our scalable system, your demands are fulfilled without any downtime - no migration of files or databases are required and there are no changes in your settings.

cPanel / WHM License Included

The cPanel & WHM software package is an easy-to-use graphical control panel that gives web hosts, and the website owners they serve, the ability to quickly and easily manage their servers and websites.

Private Hostname - host.yourdomainname.com

We setup your host name as host.yourdomainname.com and configure reverse pointers for the server I.P. to exclusively match your hostname. This ensures that your genuine emails are NEVER Blacklisted or Blocked by RBL lists.

Isolated resources for faster performance

Our VPS nodes are divided into isolated containers that each have their own set of memory, disk space and CPU power. One user simply can't bog down the entire server.

Fast and quality support around the clock

Need any assistance, any time of the day & you can expect us to be there for you.

Custom Built, Enterprise-grade hardware

All our Managed VPS servers are enterprise-grade and use only the best components available, to ensure maximum performance and stability.

Frequently Asked Questions

What is a VPS?

VPS stands for a Virtual Private Server. A virtual private server is created by partitioning a dedicated server into multiple servers such that each virtual server can run its own full-fledged operating system, and each server can be independently rebooted. Each individual server is called a container.

You have full control of your container and get dedicated resources such as RAM, Disk Space, Bandwidth, and CPU for that container. Just like you, other users get containers on the same server; however they do not interfere with one another and work in complete isolation. The cost for each container varies depending on the resources chosen for that container.

To give an example, VPS is like renting a chartered flight from an airline. You can choose between small/medium/large Turbos to Light/MidSize/Corporate Jets and you pay accordingly.

By using the industry leading virtualization solution Virtuozzo, we offer top of the line VPS packages with root access.

Why choose a VPS instead of Shared Hosting?

VPS hosting was often considered a step up from shared hosting when websites had to start supporting heavy traffic or for installing custom applications not supported due to limitations of the shared hosting infrastructure.

However, more and more businesses are now moving to VPS hosting for more reasons than just speed and flexibility.

Shared hosting is relatively insecure and emails and databases remain at risk when hosted under a shared hosting environment. The individual container model of Virtual private servers nearly eliminate this risk by ensuring that no other domains/websites/applications are hosted within the clients container.

VPS is scalable with zero downtime. You can choose a minimal allocation VPS to run a simple e-mail server or a high-end VPS to run a webserver with enough resources to support extensive database applications and heavy traffic. It is no accident that the word "Private" makes an appearance between "Virtual" and "Server" - VPS hosting is inherently more secure than shared hosting.

The VPS fills the gap economically by providing a bridge between less expensive shared server hosting and more expensive dedicated server hosting.

Many of our clients chose a VPS to host their applications or their email server because of practical problems faced with shared hosting; some are shared below:

A) When a single employee entered an incorrect password multiple times, the entire IP of the clients network used to be blocked by the firewall and all email communication used to stop. On the VPS the IP addresses of the clients network were whitelisted and even if an employee enters incorrect passwords by mistake, access to the clients network is not blocked and email communication is not disrupted.

B) Many clients needed to send a larger volume of emails but because Shared hosting servers have a limit on the number of emails that can be sent, this limit was exceeded time and again, disrupting email communications. Moving to a VPS ensured that larger volume mails are sent as a VPS does not have the restrictions imposed by shared hosting.

C) Applications of some clients needed special configuration and settings which were not possible under a shared hosting environment. This was easily done on a VPS.

Our WorldClass Private Email & Hosting (VPS) Network:

Network

- Multiple carriers with diverse building entrances
- Fully redundant Cisco architecture using 12008 routers and 6509 Layer3 switches
- HSRP failover protection
- Dual network feeds to each customer
- 100% Service Level Agreement

Power Systems

- Liebert and Powerware UPS with 120, 208, 220VAC available
- Maintenance by-pass
- 2400 amps DC plant
- 100% diesel generator backup with auto start and auto transfer switch
- Generator capacity equal to building utility service
- A and B DC plants totally diverse
- Fuel capacity exceeds 24 hours
- Fuel delivery contract with 2-hour guarantee

Environmental Controls

- Liebert air
- Under-floor cooling
- Humidity control via Liebert units
